Geologic modelling, geological modelling or geomodelling is the applied science of creating computerized representations of portions of the Earth's crust based on geophysical and geological observations made on and below the Earth surface. A geomodel is the numerical equivalent of a three-dimensional geological map complemented by a description of physical quantities in the domain of interest.

Geology describes the structure of the Earth beneath its surface, and the processes that have shaped that structure. It also provides tools to determine the relative and absolute ages of rocks found in a given location, and also to describe the histories of those rocks. [citation needed] By combining these tools, geologists are able to chronicle the geological history of the Earth as a whole ...

A group of geologists have drawn my attention to the 2010/2013 Geological Society of London's statement on climate change and asked if I could arrange an on-line discussion about it. The lead author of the statements is Dr Colin Summerhayes who has participated as guest blogger and commenter on Energy Matters before. And so I asked if I could reproduce the statements on these pages and ...

The Geological Society of London's Statement on Climate

1. Introduction. A blast generates ground shock and vibration which may cause damage to the surrounding structures. In the recent decades, blast-induced ground shocks and their propagation in rock mass have been drawing more and more attention.
