With this implementation the only additional current in this transmitter is the base to emitter current! In this case, the additional ASK transmitter current is merely micro amps but still achieving 10- 15db of modulation depth. One thing to remember is that the data-in must be inverted with this design.

High Data Rate SAW-Stabilized ASK Transmitter - Wireless

The SAT HDR GOES transmitter complies with the High Data Rate (HDR) specifications. The transmitter supports transmission lengths from one to 120 seconds. Short transmission lengths enable multiple stations to use the same NESDIS-assigned window. A GPS receiver and antenna are included to acquire time and position data.
