High Performance Algorithms for Multiple Streaming Time Series by Xiaojian Zhao A dissertation submitted in partial fulfillment of the requirements for the degree of

### **High Performance Algorithms for Multiple Streaming Time Series**

High performance algorithms can converge from ten to one hundred times faster than the classic algorithms. These faster algorithms fall into two main categories. One category uses heuristic techniques, which were developed from an analysis of the performance of the standard steepest descent algorithm, and the other category of fast algorithms ...

Scope: ECE 569 stresses the need for and the design of high-performance computing (HPC) systems. HPC

is more than just for achieving high performance - it is a compelling vision for how computation can seamlessly scale from a single processor to virtually limitless computing power. The single enabling force for HPC is the use of parallelism.
