

### **hospital acquired infection principles pdf**

Hospital-acquired pneumonia (HAP) or nosocomial pneumonia refers to any pneumonia contracted by a patient in a hospital at least 48–72 hours after being admitted. It is thus distinguished from community-acquired pneumonia. It is usually caused by a bacterial infection, rather than a virus.. HAP is the second most common nosocomial infection (after urinary tract infections) and accounts for 15 ...

INTRODUCTION. *Mycoplasma pneumoniae* is one of the smallest free-living organisms and a common respiratory tract pathogen. Upper respiratory tract infections and acute bronchitis are the most common manifestations of *M. pneumoniae* infection, but pneumonia can also occur. Manifestations outside the respiratory tract (eg, encephalitis, hemolytic anemia, and carditis) are rare and can occur with ...

Infection is the invasion of an organism's body tissues by disease-causing agents, their multiplication, and the reaction of host tissues to the infectious agents and the toxins they produce. Infectious disease, also known as transmissible disease or communicable disease, is illness resulting from an infection.. Infections are caused by infectious agents including viruses, viroids, prions ...

A urinary tract infection (UTI) is an infection caused by bacteria in part of the urinary tract. In the lower urinary tract, it is known as a simple cystitis (a bladder infection). In the upper urinary tract, it is known as pyelonephritis (a kidney infection). Symptoms from a lower urinary tract infection include painful peeing and either frequent peeing or wanting to pee (or both).
