Introduction to Lean Product and Process Development

Lisp (historically, LISP) is a family of computer programming languages with a long history and a distinctive, fully parenthesized prefix notation. Originally specified in 1958, Lisp is the second-oldest high-level programming language in widespread use today. Only Fortran is older, by one year. Lisp has changed since its early days, and many dialects have existed over its history.

In mathematics and computer science, an algorithm (/ ˈælˌɡərɪˈθɪm /) is an unambiguous specification of how to solve a class of problems. Algorithms can perform calculation, data processing and automated reasoning tasks.. As an effective method, an algorithm can be expressed within a finite amount of space and time and in a well-defined formal language for calculating a function.

This version of the Yocto Project Reference Manual is for the 2.6 release of the Yocto Project. To be sure you have the latest version of the manual for this release, go to the Yocto Project documentation page and select the manual from that site. Manuals from the site are more up-to-date than manuals derived from the Yocto Project released TAR files.

Yocto Project Reference Manual

Introduction. This is a set of free, online chapters about using CVS (Concurrent Versions System) for collaboration and version control. It covers everything from CVS installation and basic concepts all the way to advanced usage and administration.
